Overview of Cooperative Farmers Elevator Summer Internships

Our goal is to **"Create a challenging environment that will help prepare college students for full-time employment after graduation"**.

Cooperative Farmers Elevator (CFE) offers three levels of internships:

Operational Internship: This internship is designed for the college student that has a goal of being strongly involved in the operational aspect of business after graduation. This intern may be involved in working at one of our various warehouses assisting growers with their crop protection chemicals, seed or other agronomy related products and/or services. The operational intern also will be exposed to crop scouting and some customer interaction.

Scouting Internship: This internship is designed for the college student that has a goal of being strongly involved in the scouting and sales aspect of business after graduation. Although there will still be some operational activities involved in this internship, the goal would be to have this person transition to field scouting as soon as the crop size and stage allows. All information that is gathered by the scouting intern would be relayed to the agronomist whom they are working with in the collection of this data.

Sales and Marketing Internship: This internship is designed for the college student that has a goal of being strongly involved in sales and marketing after graduation. This intern will also be involved in operations and scouting but will quickly move to direct interaction with growers. Normally, we give this person some type of sales and marketing goal which allows them to work with a limited amount of customers promoting some type of specialty product or service.

CFE interns are paired up with a specific location and normally tied to one or two agronomists that will help mentor them throughout the summer intern season. They are expected to attend all agronomy staff meetings as well as any plot tours or summer education opportunities. They are trained directly in the field by our Agronomy Tech Specialist and are monitored by each location agronomist.
